## Stangensizer

The well-proven screening solution for a blockage-free pre-screening

### Application

Pre-screening in the range of approx. 80 bis 400 mm

### Material

Household, industrial and bulky waste, wrappings, biomass, matured timber, plastic wastes, electronic waste, roofing paper, shredder material, building rubble, ...

### Advantages

- Efficient pre-screening of different materials
- Minimum wear through robust execution
- Blockage-free pre-screening through one-side fixing of the gate bars
- Adaptable screening sizes adjustable
- Screen sizes variable

## Stangensizer

- The SPALECK-Stangensizer is executed as a circular vibrating screen and geared with an AC motor.
- The individual arranged gate bars allow a screening process of different screening sizes. The execution of the sizer elements avoid a blockaging, a high operating security and allow a versatile application.
- Modifications can be easily made at the adjustable and changeable gate bars.
- Scope of delivery can be stationary dust-protection and sub-frame construction for compensating dynamic vibrations.

Household waste

Industrial waste

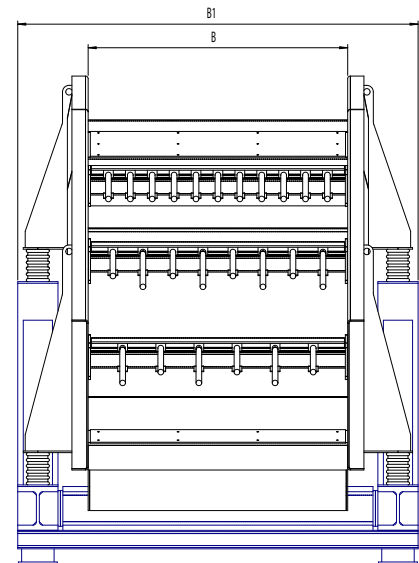

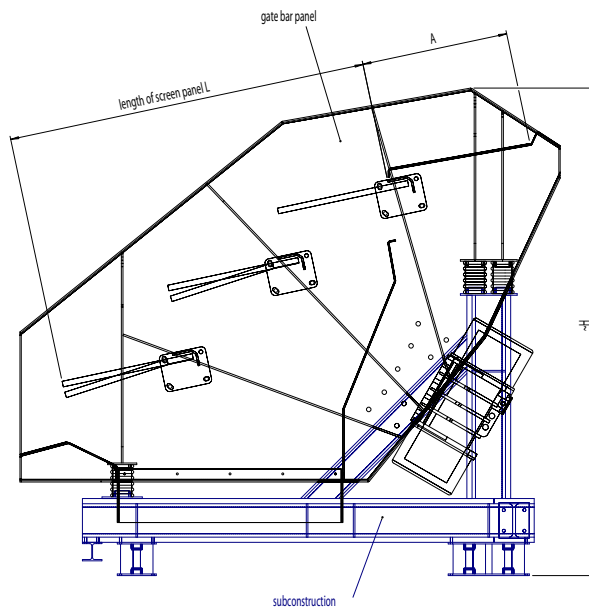

Plastics scrap

Biomass

Roofing paper

Descriptions	B	L	H	B <sub>1</sub>	T	Weight (kg)	Power (kw)
